

SEP 18 2009

Appl. No. 10/823,132

Amdt. dated September 18, 2009

Reply to final office action of September 1, 2009

**Amendments to the Claims**

1-28. (Cancelled)

29. (Currently Amended) A method of operating a computing platform, the method comprising:

receiving a secured data product comprising an encrypted first portion of the data product and an unencrypted second portion of the data product, wherein said first portion of the data product comprises indices into data contained in the second portion of the data product, said encrypted first portion being unusable by the computing platform before decrypting said encrypted first portion and said unencrypted second portion being unusable by the computing platform before decrypting said encrypted first portion, wherein the data product includes an encrypted authorization key;

decrypting said encrypted first portion with a decryption key to obtain said indices into data contained in the second portion;

decrypting said encrypted authorization key to obtain verification information; and

executing an application program on the computing platform to use the data product including both the decrypted first portion and the second portion for an intended purpose, wherein to use the data product for said intended purpose said indices are used to obtain said data contained in the second portion of the data product, wherein said application program is not included with said data product, wherein said application program being installed on said computing platform prior to said step of receiving said secured data product.

30. (Previously Presented) The method of claim 29 wherein said first portion of the data product includes decompression parameters for the data product.

31. (Canceled)

32. (Previously Presented) The method of claim 29 wherein said first portion of the data product comprises global data pertaining to the data product as a whole.

33. (Canceled).

Appl. No. 10/823,132

Amdt. dated September 18, 2009

Reply to final office action of September 1, 2009

34. (Currently Amended) The method of claim [[33]] 29 wherein said verification information comprises an ID code associated with a computing platform entitled to access the data product.

35. (Currently Amended) The method of claim [[33]] 29 wherein said verification information comprises an ID code associated with a storage medium entitled to hold the data product.

36. (Currently Amended) The method of claim [[33]] 29 wherein said verification information comprises an ID code associated with a user entitled to use the data product.

37. (Currently Amended) The method of claim [[33]] 29 wherein said decrypting said authorization key provides said decryption key for decrypting said first portion of the data product.

38. (Currently Amended) A computing system comprising:

a processor;

a data storage medium coupled to said processor, the data storage medium holding a set of data comprising an encrypted first portion of a data product and an unencrypted second portion of the data product, wherein the first portion comprises critical data that enables use of the data product, wherein said critical data is not a decryption key, wherein the first portion of the data product being unusable by the computing platform before decrypting said encrypted first portion and the second portion of the data product being unusable before decrypting the first portion of the data product, wherein said set of data comprises an encrypted authorization key;  
and

a routine executable by the processor for decrypting the encrypted first portion of the data product, thereby enabling a program executable by said processor to use the data product including both the first portion and the second portion for an intended purpose, wherein said program is not included with said data product; and

Appl. No. 10/823,152

Amdt. dated September 18, 2009

Reply to final office action of September 1, 2009

a second routine executable by the processor for decrypting the encrypted authorization key to obtain verification information to validate use of the data product.

39. (Previously Presented) The system of claim 38 wherein said data product is a geographic database.

40. (Previously Presented) The system of claim 38 wherein said critical data includes decompression parameters for the data product.

41. (Canceled).

42. (Canceled).

43. (Currently Amended) The system of claim [[41]] 38 further comprising a second routine executable by the processor for decrypting the encrypted authorization key to obtain a decryption key for decrypting the first portion of the data product.

44. (Currently Amended) A data product stored on a storage medium comprising:  
an encrypted first portion; and  
an unencrypted second portion, wherein said first portion comprises critical data that when decrypted enables a program executed on a computing platform to use the data product including both said first portion and said second portion for an intended purpose, wherein said first portion comprises indices into data contained in the second portion of the data product, wherein the encrypted first portion being unusable before decrypting said encrypted first portion and the unencrypted second portion of the data product not being usable before decrypting the encrypted first portion of the data product to obtain the indices, said program is not included with said data product, wherein said encrypted first portion includes an authorization key that provides verification information when decrypted.

45. (Previously Presented) The data product of claim 44 wherein said data product comprises a geographic database.

Appl. No. 10/823,132

Amdt. dated September 18, 2009

Reply to final office action of September 1, 2009

46. (Canceled).

47. (Previously Presented) The data product of claim 44 wherein said critical data comprises global data pertaining to said data product as a whole.

48. (Canceled).

49. (Canceled).

50. (Canceled).
